

The figure displays two bar charts side-by-side, comparing gene expression levels for two classes: Control_Saliva (left) and OLP_Saliva (right). The y-axis represents expression levels, with a dashed line at the bottom and a solid line at the top. The x-axis represents genes, with a vertical line separating the two classes. The Control_Saliva chart shows a single peak for the OLP gene, while the OLP_Saliva chart shows multiple peaks for the OLP gene.

class: OLP_Saliva
