

The figure displays two bar charts side-by-side, separated by a vertical black line. The left chart is labeled 'class: Control_Saliva' and the right chart is labeled 'class: OLP_Saliva'. Both charts share a common y-axis with horizontal grid lines. The Control_Saliva chart shows high expression levels for many genes, with several bars reaching the top of the scale. The OLP_Saliva chart shows low expression levels for most genes, with only a few bars reaching moderate heights. A vertical black line is positioned between the two charts, indicating a comparison of gene expression between the two conditions.

class: OLP_Saliva
